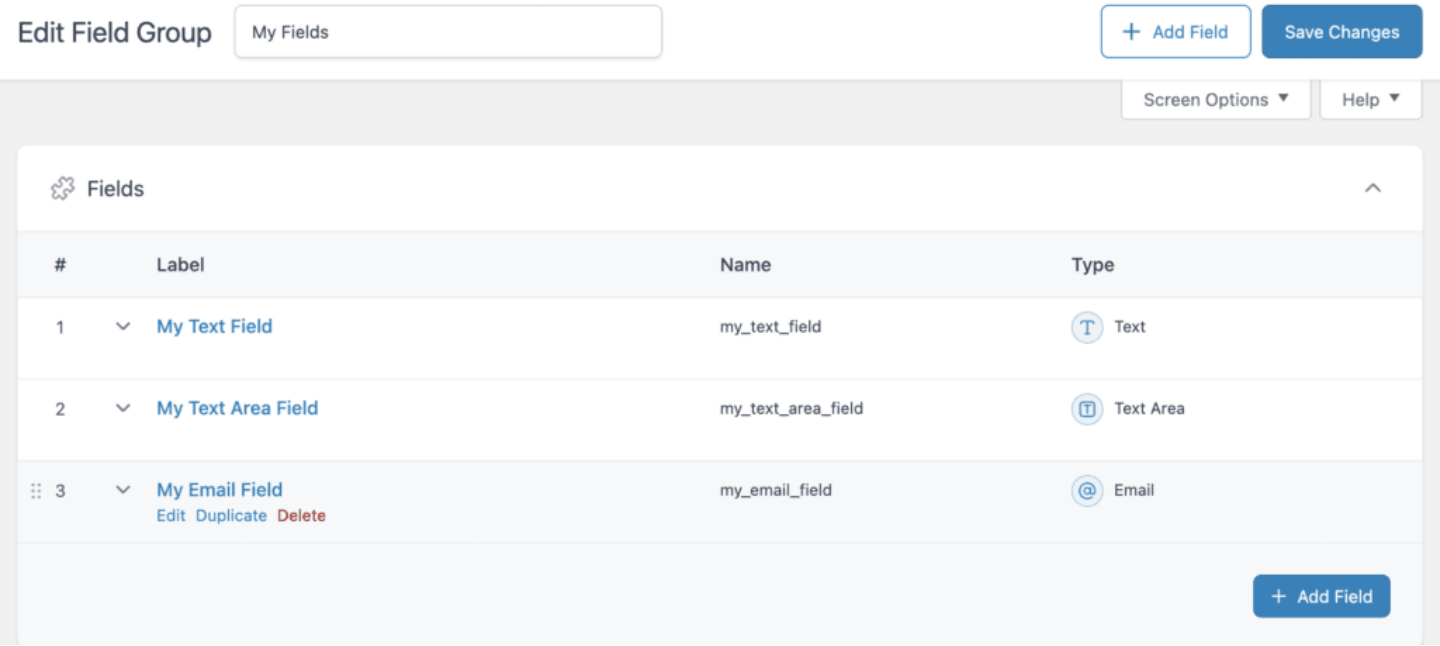
Advanced Custom Fields and PublishPress Permissions (Pro)

Integrations · https://publishpress.com/knowledge-base/acf-publishpress-permissions/

This feature requires the Pro version of the PublishPress Permissions plugin.

Advanced Custom Fields is a plugin that allows you to quickly and easily add fields to WordPress posts. With the Pro version of PublishPress Permissions, you can control who can view Field Groups created with Advanced Custom Fields.

PublishPress Permissions can control viewing access to all the fields inside a Field Group. In the screenshot below, you can see a sample Field Group with three fields. This Field Group is called "My Fields".



To control view access, go to the "Permissions" link in the WordPress admin area. You can edit a user role, user group, or individual user.

- **Post Type**: Field Group
- **Operation**: View

- **Adjustment**: Choose Enable or Block
- **Select Field Groups**: Choose the Field Groups that you want to control access to.
