PublishPress Authors and Polylang

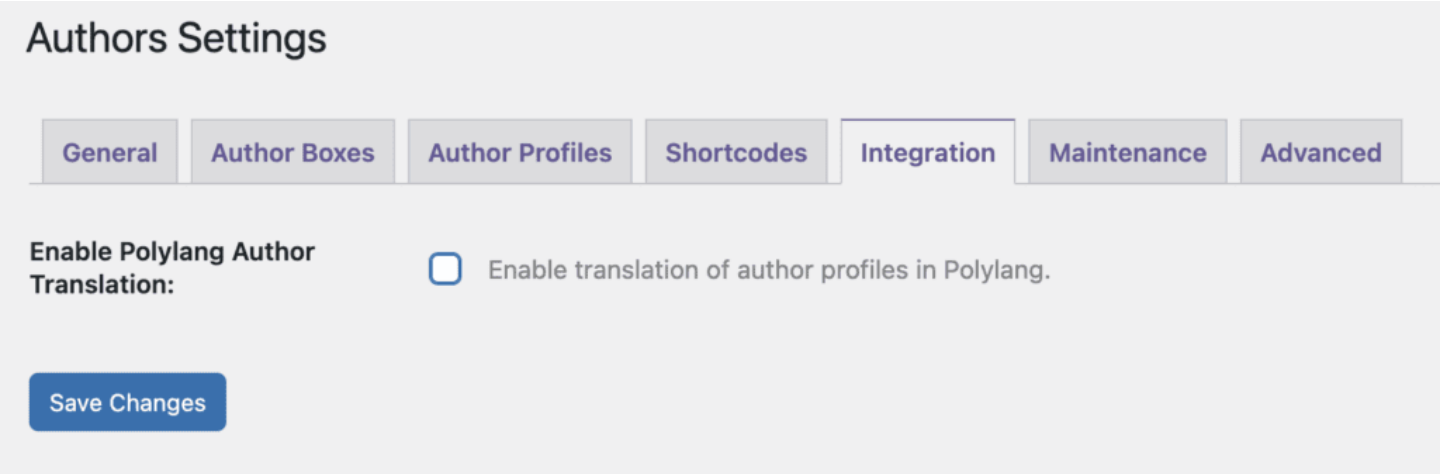
Authors Integrations · https://publishpress.com/knowledge-base/authors-polylang/

The Pro version of PublishPress Authors plugin does provide an integration with the Polylang plugin which allows you to create a multilingual site.

One common issue between the Authors and Polylang plugin is the translation of author profiles. The Authors plugin stores the author profiles as taxonomy terms. The Polylang plugin will normally attempt to duplicate taxonomy terms which can be a problem as it leads to duplicate author profiles.

If you want to disable this behavior, follow these steps:

- Go to the "Settings" screen in PublishPress Authors Pro and click the "Integration" tab.
- Disable the "Enable translation of author profiles in Polylang" setting.



Next, you can confirm that the Polylang translation is disabled.

- Go to "Languages" then "Settings" in your WordPress admin menu.
- Look for the "Settings" link under "Custom post types and Taxonomies". If you have a small site with few plugin, this link may not be available, in which case you do not need to do anything more. If the "Settings" link is available, click the link and check that the "Authors" box is not available.

Detect browser language
Activate
When the front page is visited, redirects to itself in the browser preferred language. As this doesn't front page cache for known cache plugins.
Media
Activate
Activate languages and translations for media only if you need to translate the text attached to the description... Note that the file is not duplicated.
Custom post types and Taxonomies
Settings
Activate languages and translations management for the custom post types and the taxonomies.
