Approved by a user in this role

Approval Tasks · https://publishpress.com/knowledge-base/approved-by-a-user-in-this-role/

With this requirement, you can stop content from being published unless it has been approved by a user in a particular role.

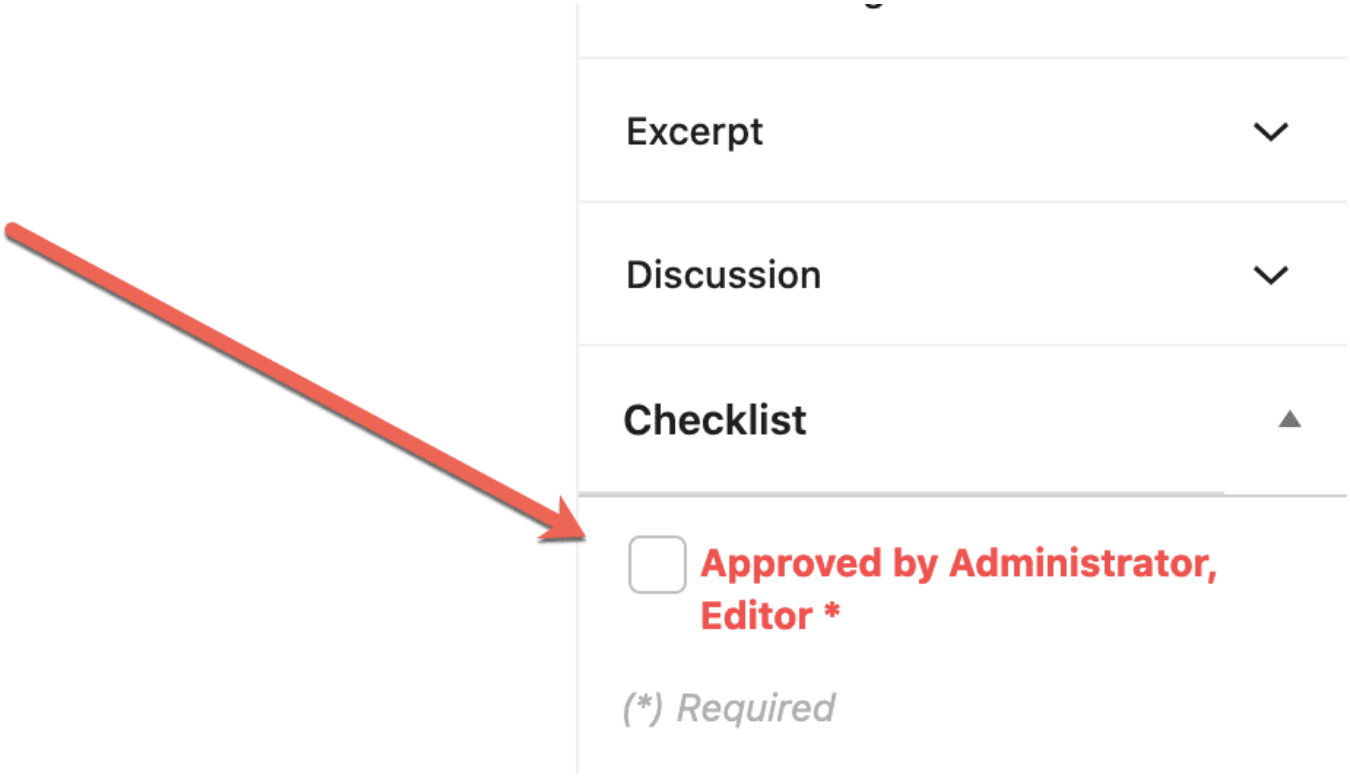

This is an excellent way to allow some users to "sign off" on content before it is published.

- Click the "Approval" tab. The screenshot below shows the approval option.
- You can choose from “Disabled, Recommended, or Required” options.
- In the final box, you can choose which roles can approve posts. In the image below, posts can't be published unless they are approved by an Administrator or Editor.

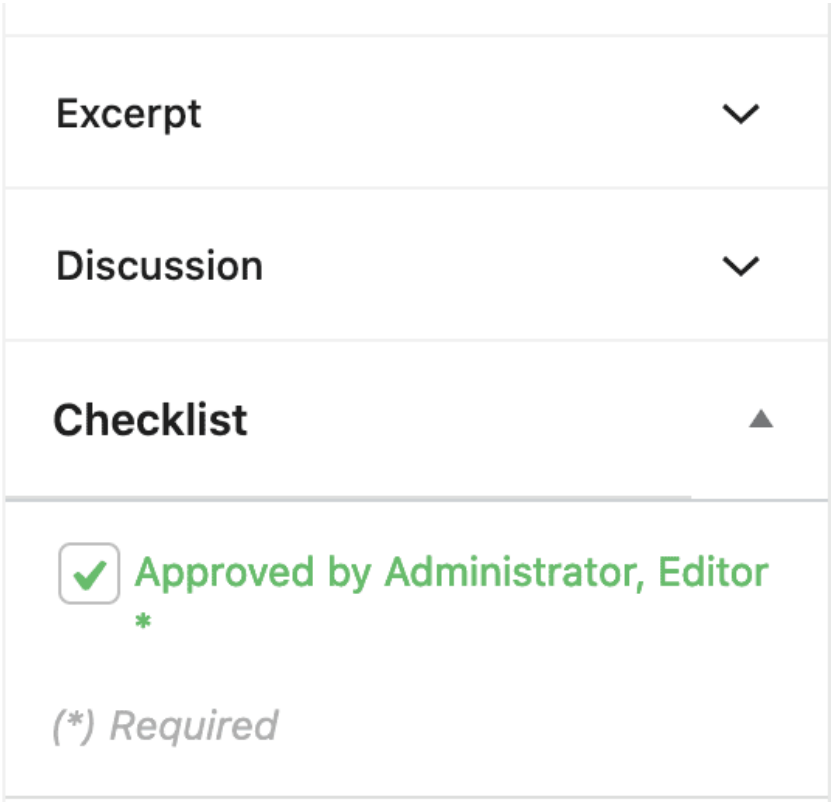

Approver By User Role

If a user is in one of the selected roles, they will see a checkbox like the one shown below.

Disabled Checkbox User Role

If the user approves the post, they can check the box and the content can be published.

Approved Checkbox User Role
