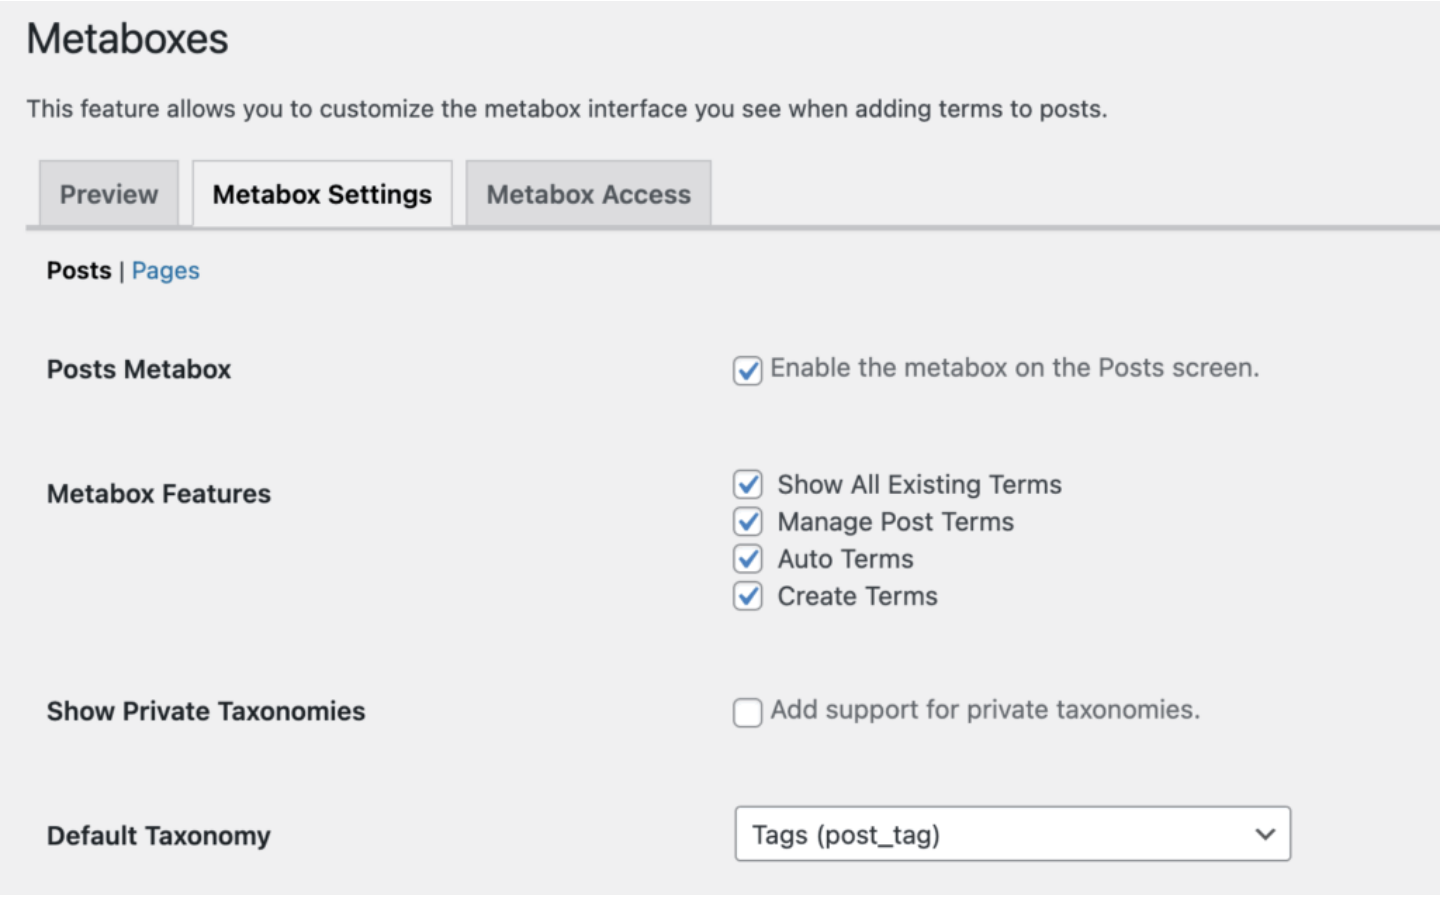
Metabox Settings

Taxonomies: Metaboxes · https://publishpress.com/knowledge-base/metabox-settings/

It's possible to configure important options for the PublishPress Taxonomies metaboxes under each post.

Enabling Metabox Features

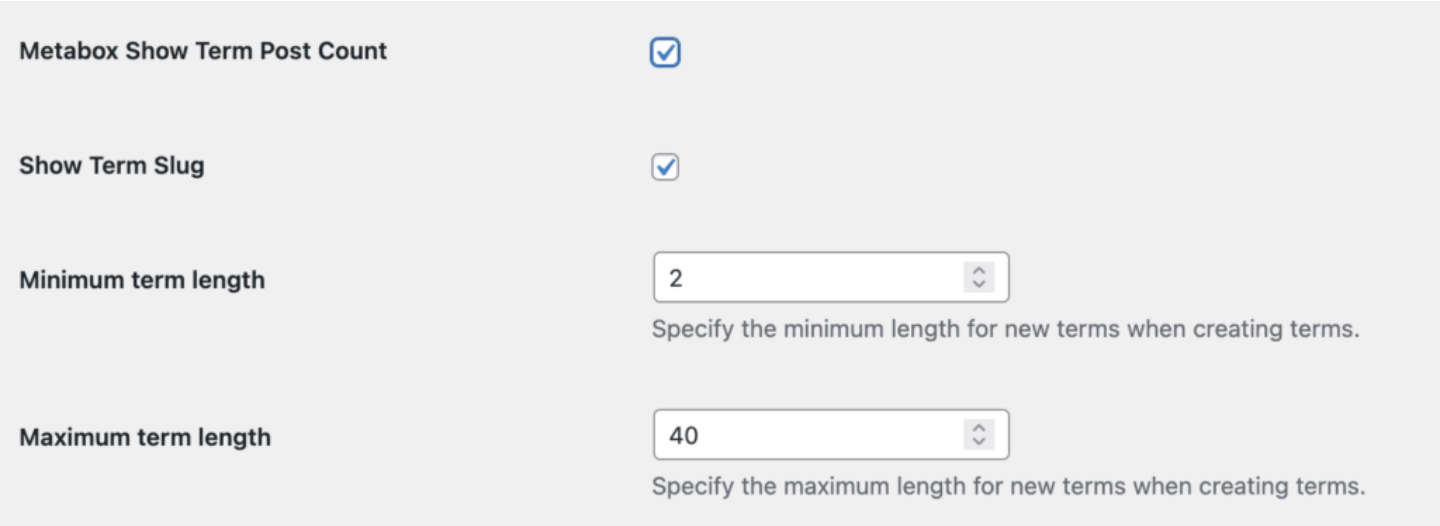
Go to Taxonomies > Metaboxes > Metabox Settings. There will be settings for "Posts", "Pages" and other content types.



metabox settings tab

Scroll down the screen and you see options. For example, you can choose to show the number of times each term has been used ("Metabox Show Term Post Count") or the slug for the term ("Show

Term Slug").



access features

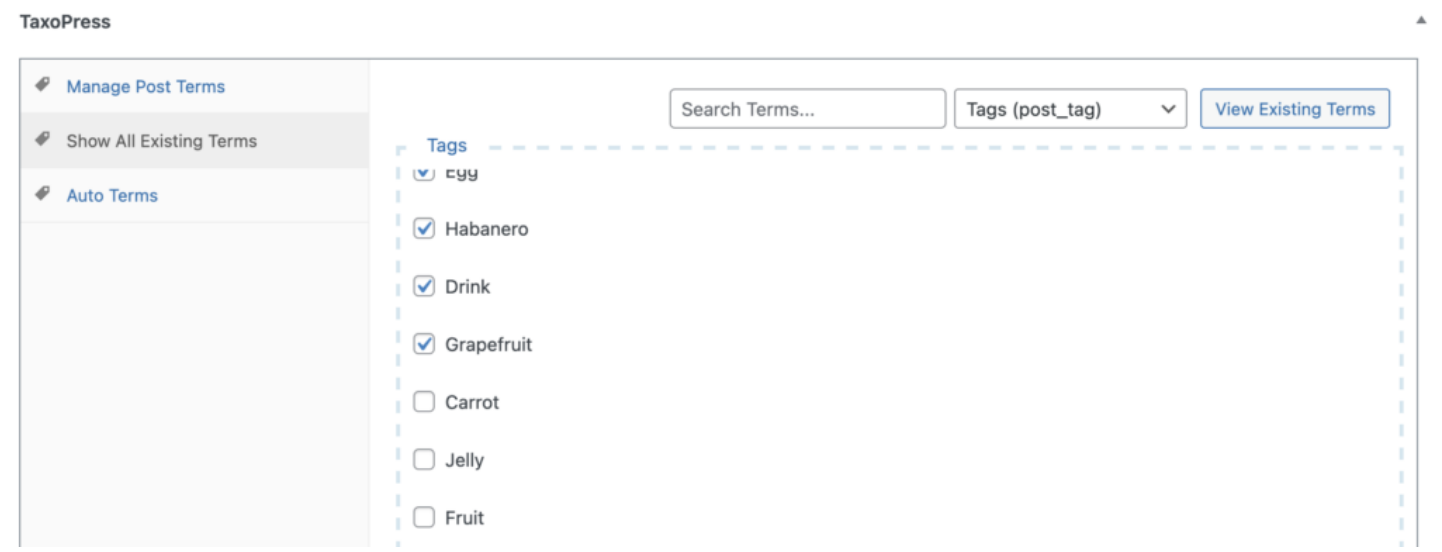
Further down the screen you can control settings such as minimum and maximum length of terms created.

Extra Display Options in Taxonomies Pro

This feature requires the Pro version of the Taxonomies plugin

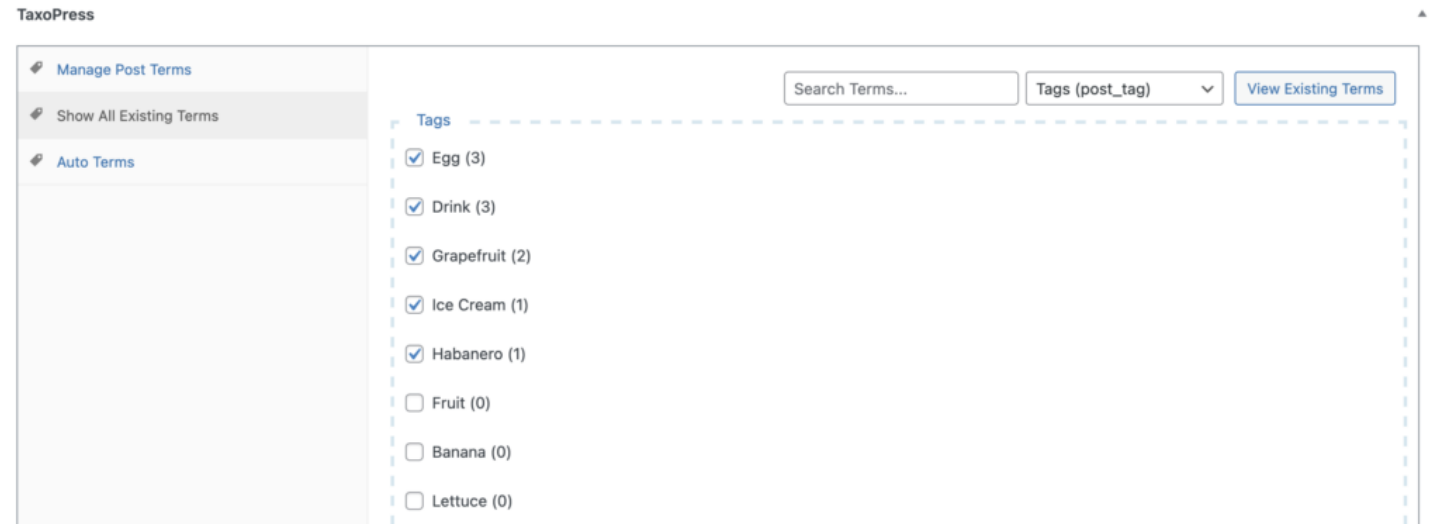
With Taxonomies Pro you can customize the PublishPress Taxonomies metabox. You can use the Taxonomies Pro settings to customize this layout. In this screenshot, we use the "Taxonomy Display" option.

This next screenshot shows a "Checkbox" display. With this display it's no longer possible to add any more Tags or Categories. The authors can only choose terms that already exist.



metabox checkbox

You can customize the appearance of this metabox. For example, this next screenshot shows the same terms, but organized by popularity. You'll always see the most commonly-used terms on the top of the list.



terms popularity

This next screenshot shows another way to customize the metabox. You can choose a search box display. This is ideal if you have really large number of terms.
