Comparing the Taxonomies AI Integrations (Pro)

Taxonomies: Integration · https://publishpress.com/knowledge-base/comparing-the-ai-integrations/

This feature requires the Pro version of the Taxonomies plugin

TaxoPress currently has integrations with four different AI services. Each service has different pros and cons. We recommend testing them to see which is the best choice for your site.

The services do support different languages and have different pricing structures. This table below has details for over 20 popular languages. If your language is in this table, IBM/Watson may produce the best results. If your language is not in this table, we recommend testing OpenAI as that is the most likely service to support other languages.

- **OpenAI**: There is no official language documentation, but they do have a pricing guide.
- **IBM Watson**: language documentation and pricing guide.
- **Dandelion**: language documentation and pricing guide.
- **LSEG / Refinitv**: language documentation and pricing guide.
