Which Tag Groups Feature Do I Need?

Below you find a list of common cases that users need to achieve. Some of these features are available only in the Pro version.

Tag Clouds

Tag clouds show tags of selected groups. When your visitors click on a tag, they will be taken to a new page where they see a list with matching posts.

Displaying Tag Groups

I need to display the tags under tabs (arranged horizontally). The tabs should represent tag groups.

→ Use the Tabbed Tag Cloud.

I need to display the tags in an accordion (stacked vertically and sliding up and down). Each slider should represent a tag group.

→ Use the Accordion Tag Cloud.

I need to display the tags in under tabs (arranged horizontally). The tags should be sorted alphabetically into groups by their first letters.

→ Use the Alphabetical Tag Cloud.

I need to display the tags in a table: I the first row are the groups and below in each column the tags of a group.

→ Use the Table Tag Cloud.

I need to display the tags in one tag cloud. It should be possible to filter the tags by group or by name.

→ Use the Shuffle Box.

I need to display a tag cloud but only those tags that belong to a particular post.

Use any of the tag clouds with the parameter tags_post_id. For the current post you use tags_post_id=0.

I need to display a tag cloud but only tags of those groups that belong to a particular post.

Use any of the tag clouds with the parameter groups_post_id. For the current post you use groups_post_id=0.

Not Displaying Tag Groups

I need to display the tags in a simple tag cloud. The tags of different groups should be mixed together and no group names should be displayed.

→ Use the Simple Tag Cloud.

I need to display only a subset of particular groups in a simple tag cloud.

→ Create a tag group for the tags that you want to display and use the Simple Tag Cloud.

Other Ways to Display Tags

I need to automatically display under each post the tags that belong to this particular post. Tags should be sorted by groups.

→ Activate the Post Tag feature in the Tag Groups settings.

Lists of Posts

I need a filter on my page where visitors first select a group and then some of the tags of this group. Every time they add or remove a tag, they should see a list of

posts that match these tags.

→ Use the Dynamic Post Filter.

Other Ways to use Groups

I need to display on a page the name of one or more tag groups or the number of tags in them.

→ Use the Group Info shortcode.

I need a menu where visitors can select a group. They will then be taken to a list of matching posts.

→ Use the Tag Groups Menu shortcode.
