# Introduction to Taxonomies Metaboxes

Taxonomies: Metaboxes · https://publishpress.com/knowledge-base/introduction-taxopress-ai/

The PublishPress Taxonomies Metaboxes feature enables you to replace the default way of adding Categories, Tags, and other terms in WordPress. When this feature is enabled, it will appear below each post. This screenshot gives an idea of how the feature will show:

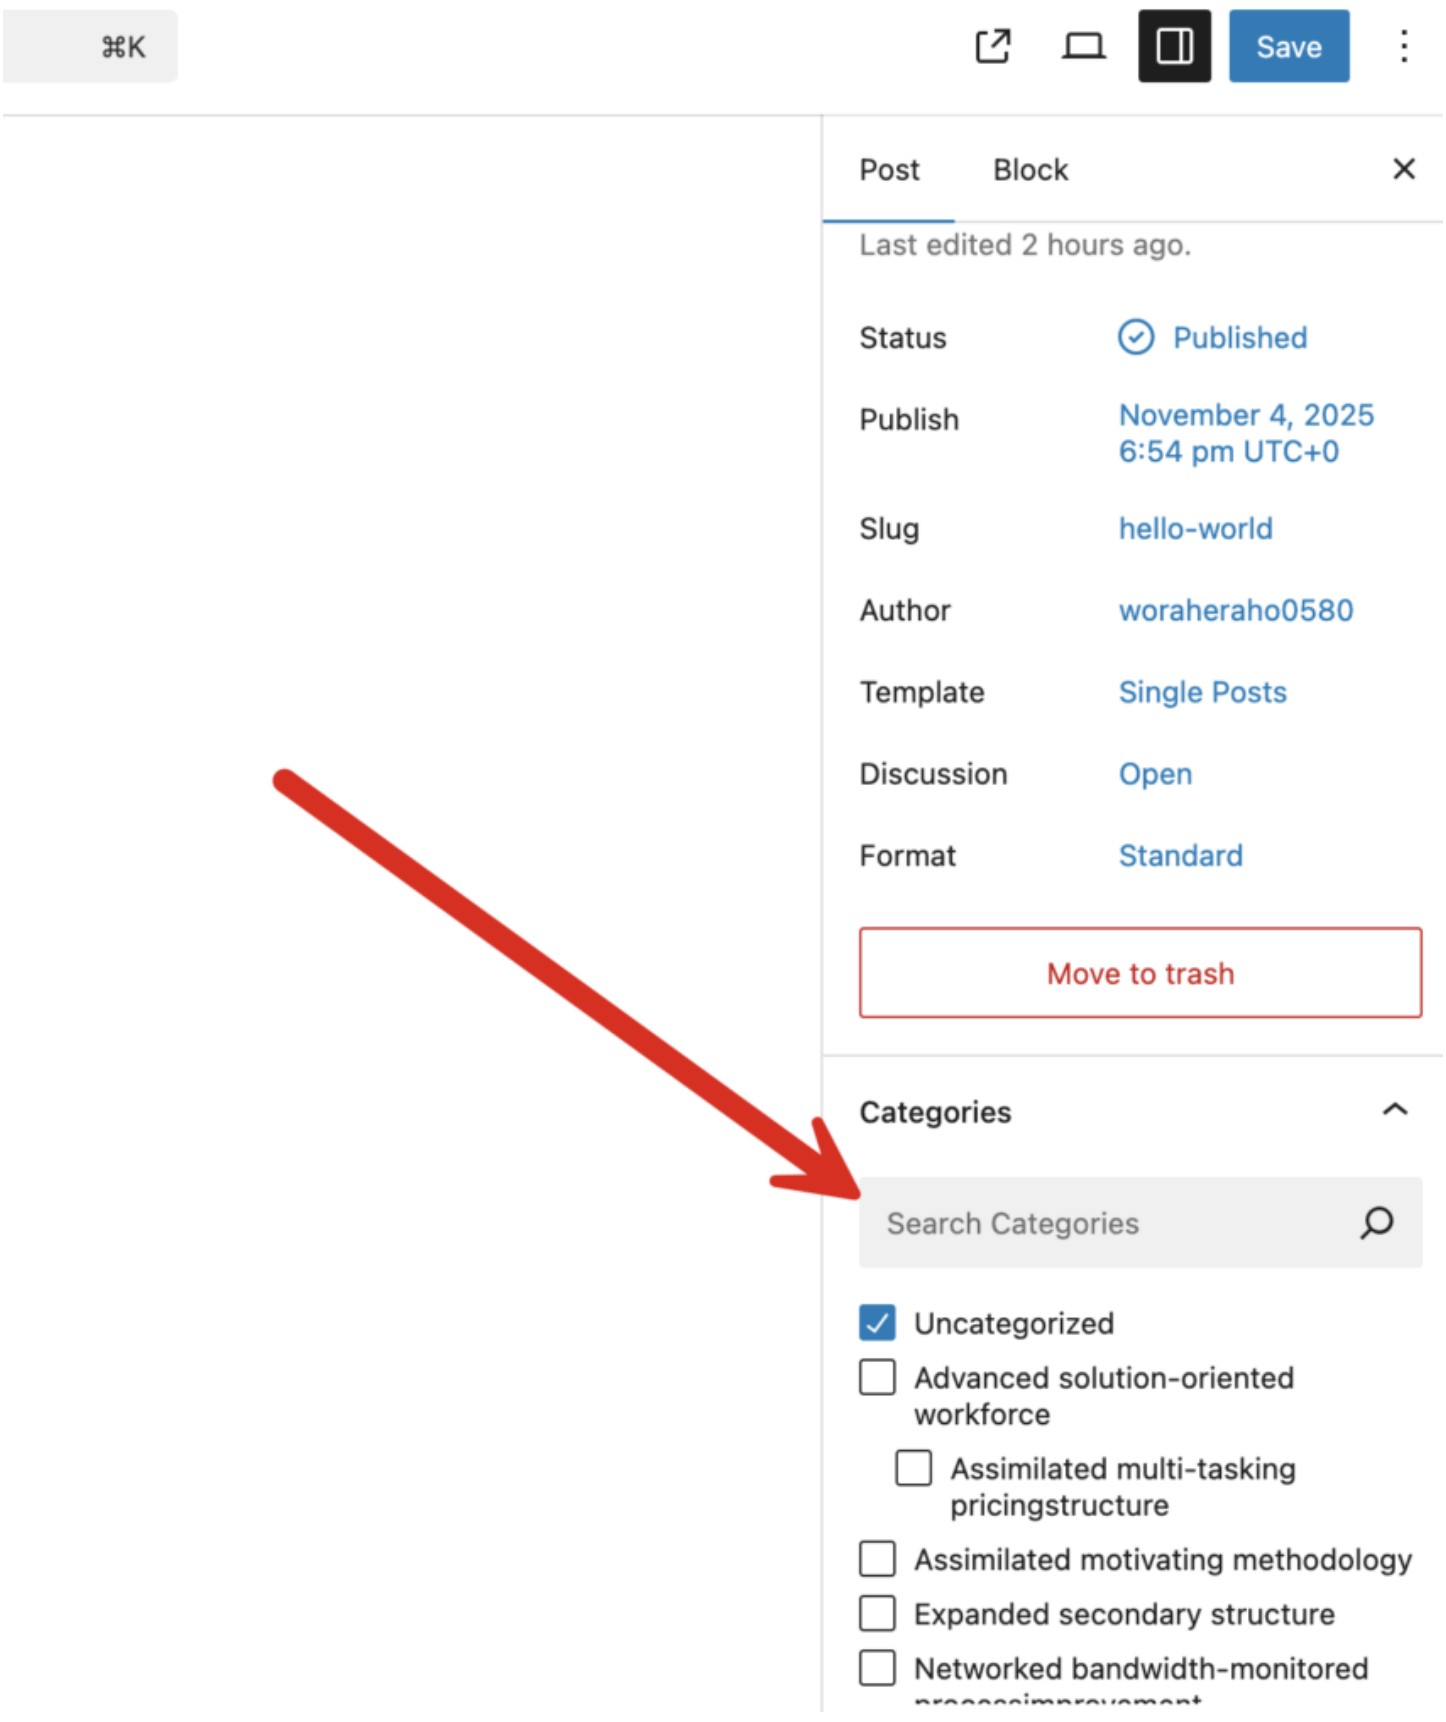

metaboxes location

In contrast, the default WordPress metatox options are shown in the screenshot below. These options are very limited. The Categories are shown in a series of checkboxes. The Tags are shown in a search box. There’s no way to modify either of those displays.

Here are some of the customer requests that are not possible with the default WordPress options:

- “How do I set a maximum or minimum number of Categories to add?”
- “I want to sort the Categories alphabetically.”
- “I need to see the most popular Tags first.”
- “Can I allow authors to add new Categories but not Tags?”
