Options for Related Posts

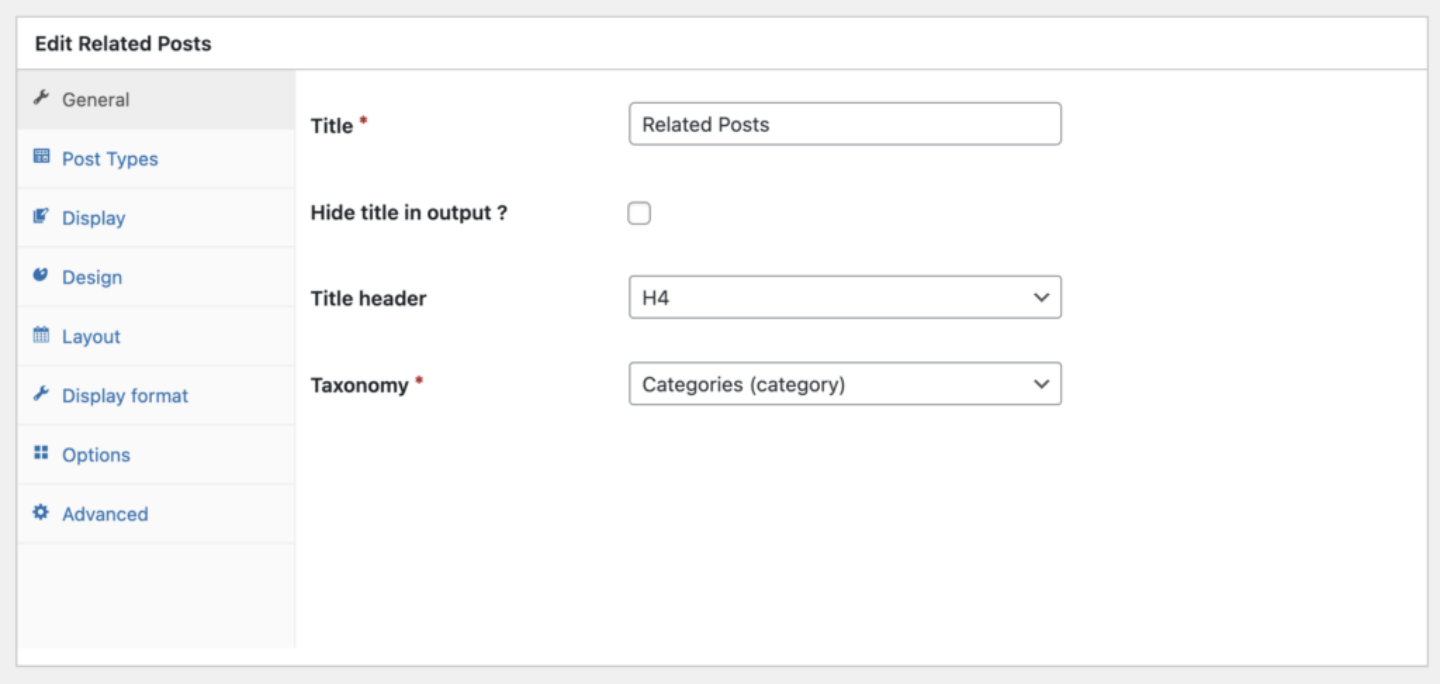

Taxonomies: Related Posts · https://publishpress.com/knowledge-base/options-for-related-posts/

There are detailed options that you can customize for the display or your Related Posts. You will find these options by going to Taxonomies > Related Posts.

General

On the first tab called "General", you can change key settings for each related posts display:

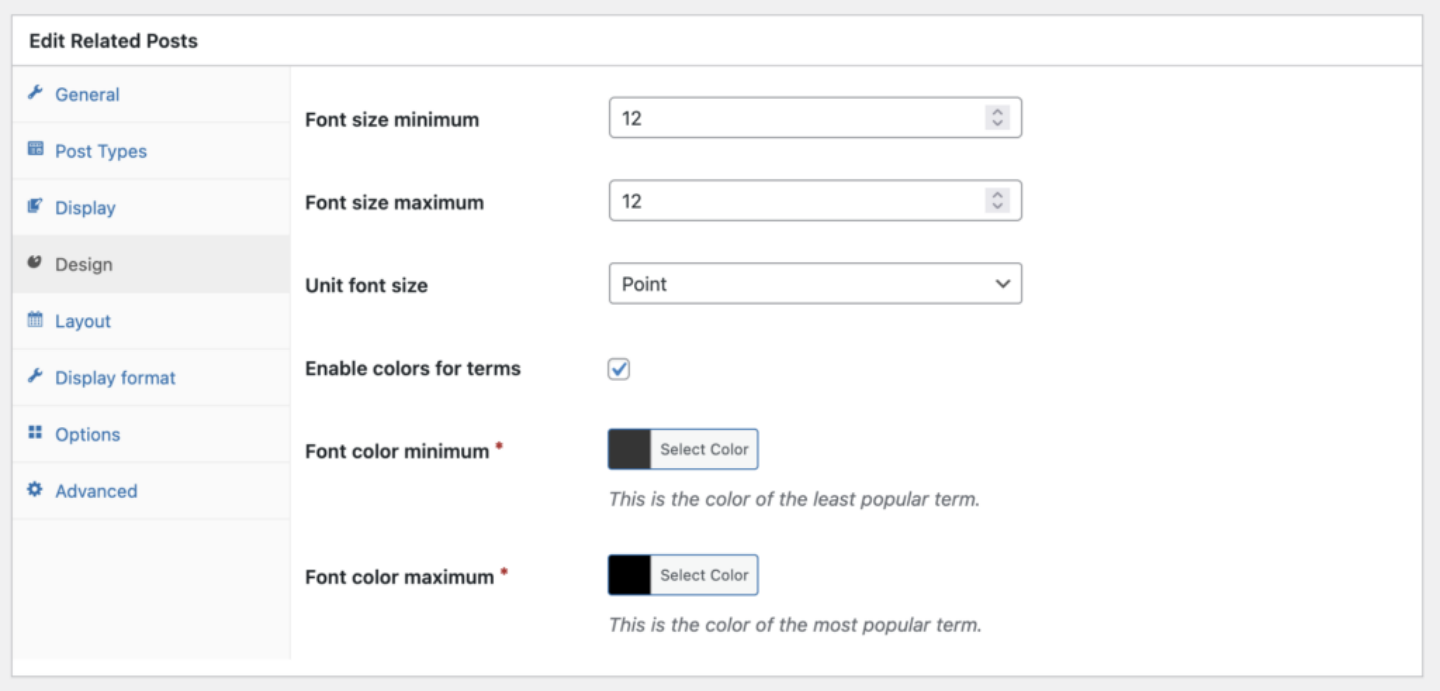

- Title
- Title header
- Taxonomy
- Display format

edit related posts

Design

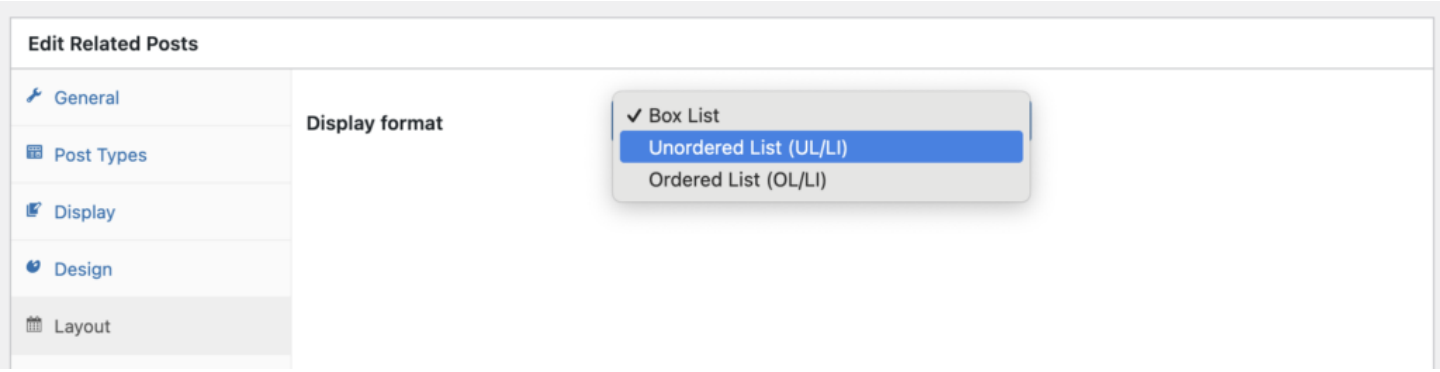

These settings allow you to customize design aspects of your display.

Options

If you click the "Options" tab, you'll get more settings:

- **Text to display before posts list**: Text that should be displayed before the posts list.
- **Text to display after posts list**: Text that should be displayed after the posts list.
- **Limit related posts based on timeframe**: This allows you to show related posts only if they fit within a timeframe.
- **Related Posts Order**: This controls how posts are ordered when displayed to visitors.
- **Text to show when there is no related post**: You can leave this empty to hide this feature when it does not apply to a post.
- **Hide output if no related post is found?**: This will hide the whole Related Posts feature if nothing relevant can be displayed.
