Prohibited words (Pro)

Content Tasks · https://publishpress.com/knowledge-base/prohibited-words/

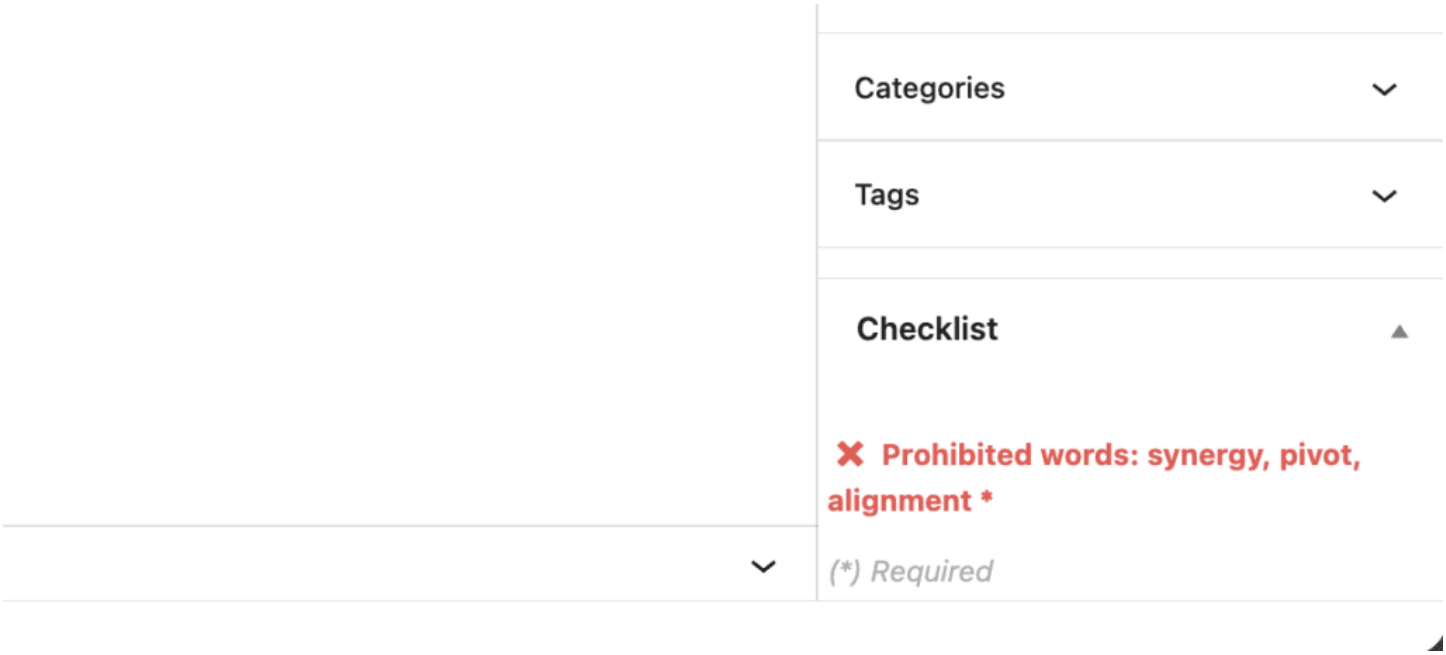

This feature requires the Pro version of the PublishPress Checklists plugin.

With the Pro version of the PublishPress Checklists plugin, you can prevent some words being added to a post. If the wrong words are in a post, you can choose to show a warning, or prevent the post from being published.

- You can choose from “Disabled, Recommended, or Required” options.
- You can enter choices for the prohibited words.

If you enable this content option, it will be visible when you edit content. If your content does contain any of the prohibited words, this task will be marked in red in the sidebar.

If your content does not contain the prohibited words, this task will be marked in green in the sidebar.
