What are the Minimum System Requirements to Install Tag Groups?

Tag Groups: Frequently Asked Questions · https://publishpress.com/knowledge-base/what-are-the-minimum-requirements/

The Tag Groups plugin works only with post types that have tags or other non-hierarchical taxonomies, such as post tags, product tags or other tags. Categories are not supported.

In order to use the Tag Groups plugin you will need the following:

- WordPress version 4.9 or higher. Recommended is the latest version.
- An administrator account to install plugins and change settings.
- You will need knowledge of HTML and CSS if you want to customize the styling. Your web designer will be able to help you.
- WordPress 5.0 or higher or the Gutenberg plugin if you want to use Gutenberg blocks.
- A server environment that that is able to run the latest version of WordPress, including the following PHP extensions. Your hosting provider will be able to tell you, if these conditions are met.

```
dom
gmagick
SimpleXML
ssh2
xml
xmlreader
curl
date
exif
filter
ftp
gd
hash
iconv
imagick
json
```

```
libxml
mbstring
mysqli
openssl
pcre
posix
sockets
SPL
tokenizer
zlib
```

WordPress recommends also the following extensions:

```
gmagick
ssh2
exif
imagick
```
